

Beverage can height gauge

Description

The can height value is critical to ensure a successful double seaming closure. Inaccurate can height can cause various issues and can also indicate key problems with the seam closing as well as other problems.

The new **Beverage can Height Gauge** from Quality By Vision is a low cost, high quality manual solution for measuring can height for beverage cans. The gauge uses a stable granite table stand for higher accuracy measurements, using a 10 micron resolution gauge.

The gauge accommodates two can sizes. Adaptor for 330ml beverage cans is supplied.

Electronic gauge can be connected to [SEAMetal HD](#) software, or [Symphony](#) data collection software. Absolute height is automatically calculated by the software.

Beverage can height gauge

Specification

Resolution	10 microns (0.01mm)
Computer connection	RS232, can be connected to SEAMetal 9000W , or Symphony software
Base	Heavy Granite base-plate
Can sizes	Up to two different can sizes

Resolution	10 microns (0.01mm)
Computer connection	RS232, can be connected to SEAMetal 9000W , or Symphony software
Base	Heavy Granite base-plate
Can sizes	Up to two different can sizes
