

## Beverage countersink gauge

### Description

The beverage **Countersink Gauge** provides a quick and easy way for measuring countersink for beverage cans.

Easy to learn and use by any operator - the gauge is held upright on top of the can while the measurement pin goes down to the lowest countersink value.

Using a 10 micron resolution gauge, the information can be easily and automatically transmitted to the hosting computer - to any software package that supports it: SEAMetal or Symphony software.

The gauge is supplied with a stand, and a reference plate.

beverage countersink gauge

## Features

- Light and easy to manage
- 10 micron resolution.
- Computer connection (SEAMetal, CPA or Symphony software).
